For Individuals – Learn how to **proactively support** the mental health of others.

For organisations – **Protect** the mental health of your staff.

WHY RESILIENCE FIRST AID?

9 out of 10 of people can benefit from increasing resilience skills which protect against mental illness such as depression and anxiety. Throughout the pandemic, this need has only increased.

This is why we need to take a **preventative approach** to mental health. Rather than waiting until people need professional treatment, we can start supporting each other to connect and build mental wellness proactively.

Resilience First Aid (RFA) as a mental health certification teaches you **strength-based skills** to build resilience in others. You will learn how to spot signs of low resilience, learn language to talk proactively, and skills that build resilience.

This is a new approach to put **trained mental health champions** in place who actively boost the resilience and mental health in their communities.
